Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The intention relates to a pullitured at the analyse polymeric and the containing relates to a pullitured as teach intention at a starch and producing high-maltose or high-glucose the breakdown of a starch and producing high-maltose or high-glucose syrup or mixed syrup, where the starch is from rice, germinated rice, corn, barley, wheat, legumes or sweet potato. The polymentide is also useful for washing an object, textile desizing, treating lignocellulosic libras for improving fibre properties, enzymatic de-hiking of recycled paper pulp and modifying small molecules by biocatalytic reaction. The polymeptide is further useful for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which successing the polymeptide and an aqueous fluid to a desired location within the well-bore which is effective to attack the alpha-glucosidic linkages in the starch-containing fluid. The alpha amylases have increased activity and stability at increased ph and temperature and can be used in preparing dough to provide an improved clasticity, improved since-ability, improved palatability or improved clasticity, improved since-ability, improved palatability or improved flavour. This sequence represents DNA encoding an alpha amylase of the
                                                               The invention relates to a purified alpha amylase polypeptide and the

                                                                                                                                                                                                                                                                                                            The present sequence encodes an alpha-amylase enzyme, which may be purified using the method of the invention. The specification describes a method for purifying an enzyme, such as alpha-amylase and cellulase, by flocculating fermentation broth containing bacterial cells containing the enzyme, centrifuging and extracting enzymes by filtration. Alternatively, the above method involves subjecting a fermentation broth to a heat-killing procedure, where a resultant heat-killed broth is formed, washing the heat-killed broth with a buffered medium, releasing the enzyme contained in the cells of the fermentation broth and extracting the enzyme by microfiltration. The method is useful for purifying an enzyme derived from a mixed population of organisms or an isolate from the population. The alpha-amylases are useful in corn-wer milling processes, detergents, baking processes, beverages and in oil fields (fuel ethanol)
                                                                                                                                                                                     Purifying enzyme, such as alpha-amylase and cellulase, involves flocculating fermentation broth containing bacterial cells containing the enzyme, centrifuging and extracting enzymes by filtration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ठ
                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a purified polypeptide with alpha-amylase activity and the polypucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-malcose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a survenant formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing stalling of bakery products. The invention relates to a purified polypeptide with alpha-amylase
activity and the polynucleotide encoding it. The polypeptide is useful
cor hydrolysing starch linkages, for catalysing the breakdown of a
starch, for modifying small molecules, for liquefying starch, for washing
considered in the polymetries, for enzymatic de-inking of recycled paper
configuration fibre properties, for enzymatic de-inking of recycled paper
continuous high-maitose or high-glucose syrup or a mixed
syrup, and for increasing the flow of production fluids from a
continuous continuous and found within the
continuous continuous and found within the
continuous continuous and found within the
continuous surcounds a completed well bore. The
continuous continuous completed well bore. The
colypeptide is also useful for preparing a dough or a baked product
continuous and starch modification in the paper and pulp industry, for removing
charkery products. Sequences ABX08411-ABX08815 represent DNA molecules
conding alpha amylase polypeptides of the invention
....y.meric de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wet milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling; starch modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel purified polypeptide with alpha-amylase activity, useful e.g. fo liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                                                                                   Frey G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Fig 16; 301pp; English
